Hazard Assessment, Elimination and Control

8 hours

This course provides basic training and familiarization about:

- Best practice for hazard identification, elimination, and control
- Leading indicators of injury incidents
- Risk management
- Hazard mitigation techniques
- Hierarchy of hazard controls
- Field level risk assessments
- Job safety analysis
- Inspections
- Pre-task and pre-project safety planning
- Implementation and management of hazard identification and control systems

This course is a direct lead-in and forms the basis of understanding to Incident Investigation.
